Revisioni

L'indice di revisione del catalogo è riportato a pag. 392. Al sito www.bonfiglioli.com sono disponibili i cataloghi con le revisioni aggiornate.

INFORMAZIONI GENERALI

1 SIMBOLOGIA E UNITÀ DI MISURA

Simbolo	Unità di misura	Descrizione
An _{1,2}	[kN]	Carico assiale nominale
f_s	–	Fattore di servizio
i	–	Rapporto di trasmissione
I	–	Rapporto di intermittenza
J	[Kgm ²]	Momento di inerzia
M _{1,2}	[Nm]	Coppia
Mc _{1,2}	[Nm]	Coppia di calcolo
Mn _{1,2}	[Nm]	Coppia nominale
Mr _{1,2}	[Nm]	Coppia richiesta
n _{1,2}	[min ⁻¹]	Velocità
P _{1,2}	[kW]	Potenza
Pn _{1,2}	[kW]	Potenza nominale
Pr _{1,2}	[kW]	Potenza richiesta
P_T	[kW]	Potenza termica complessiva

Simbolo	Unità di misura	Descrizione
P_{TFAN...}	[kW]	Potenza termica comprensiva del contributo fornito dalla ventilazione forzata
P_{TSR}	[kW]	Potenza termica comprensiva del contributo fornito dalla serpentina di raffreddamento
P_{TMCRA...}	[kW]	Potenza termica comprensiva del contributo fornito dalla centralina di raffreddamento con scambiatore aria/olio
P_{TMCRW...}	[kW]	Potenza termica comprensiva del contributo fornito dalla centralina di raffreddamento con scambiatore acqua/olio
Rc _{1,2}	[kN]	Carico radiale di calcolo
Rn _{1,2}	[kN]	Carico radiale nominale
t_a	[°C]	Temperatura ambiente
t_s	[°C]	Temperatura superficiale
t_o	[°C]	Temperatura dell'olio
η	–	Rendimento

₁ valore riferito all'albero veloce
₂ valore riferito all'albero lento

2 CARATTERISTICHE COSTRUTTIVE GENERALI

I riduttori della serie HDP e HDO sfruttano tecniche progettuali all'avanguardia ed offrono pertanto:

- Elevate coppie specifiche
- Rendimenti superiori
- Vibrazione e rumorosità ridotte
- Robustezza e affidabilità assolute
- Calcoli di vita secondo le Norme ISO e AGMA applicabili
- Ampia personalizzazione tramite la vasta gamma di opzioni offerte a catalogo

3 TEMPERATURE LIMITE AMMESSE

Simbolo	Descrizione / Condizione	Valore (*)	
		Olio Sintetico	Olio Minerale
t_a	Temperatura ambiente		
$t_{au \min}$	Temperatura ambiente minima di utilizzo	-30°C	-10°C
$t_{au \max}$	Temperatura ambiente massima di utilizzo	+50°C	+40°C
$t_{as \min}$	Temperatura ambiente minima di stoccaggio	-40°C	-10°C
$t_{as \max}$	Temperatura ambiente massima di stoccaggio	+50°C	+50°C
t_s	Temperatura superficiale		
$t_{s \min}$	Temperatura minima superficiale del riduttore per avviamento con carico parziale (#)	-25°C	-10°C
$t_{sc \min}$	Temperatura minima superficiale del riduttore per avviamento a pieno carico	-10°C	-5°C
$t_{s \max}$	Temperatura massima superficiale della cassa per utilizzo in modalità di funzionamento continuo a regime (rilevata in prossimità della zona veloce in entrata)	+100°C	+100°C (@)
t_o	Temperatura dell'olio		
$t_{o \max}$	Temperatura massima dell'olio per utilizzo in modalità di funzionamento continuo a regime	+95°C	+95°C (@)

(*) = Per i valori minimi e massimi specifici per le diverse viscosità d'olio, come pure per l'uso di circuiti idraulici, riferirsi alla tabella "Scelta della viscosità ottimale dell'olio". Per i valori di $t_a < -20^\circ\text{C}$ e $t_s, t_o > 80^\circ\text{C}$, scegliere (per quanto consentito in fase di configurazione prodotto) la tipologia di tenuta nel materiale più idoneo al tipo di applicazione. Se necessario contattare il Servizio Tecnico Bonfiglioli. 

(@) = Per i valori di $t_s, t_o > 80^\circ\text{C}$ e $< 95^\circ\text{C}$, è sconsigliato l'utilizzo per funzionamenti in continuo.

(#) = Per l'avviamento a pieno carico è consigliabile l'uso di una rampa graduale e prevedere un maggior assorbimento del motore. Se necessario contattare il Servizio Tecnico Bonfiglioli. 

4 INSTALLAZIONE

È molto importante, per l'installazione del riduttore, attenersi alle seguenti norme:

- Assicurarsi che il fissaggio del riduttore sia stabile onde evitare qualsiasi vibrazione. Installare (se si prevedono urti, sovraccarichi prolungati o possibili bloccaggi) giunti idraulici, frizioni, limitatori di coppia, ecc.
- Prima della eventuale verniciatura si dovranno proteggere i piani lavorati e il bordo esterno degli anelli di tenuta per evitare che la vernice ne essichi la gomma, pregiudicando la tenuta del paraolio stesso.
- Si consiglia di lavorare gli organi che vanno calettati sugli alberi di uscita del riduttore con tolleranza ISO H7 per evitare accoppiamenti troppo bloccati che, in fase di montaggio potrebbero danneggiare irreparabilmente il riduttore stesso. Inoltre, per il montaggio e lo smontaggio di tali organi si consiglia l'uso di adeguati tiranti ed estrattori utilizzando il foro filettato posto in testa alle estremità degli alberi.

Il cliente è tenuto a fare la verifica dell'accoppiamento sull'albero lento definendo tolleranze adeguate in funzione della coppia da trasmettere.

- Le superfici di contatto dovranno essere pulite e trattate con adeguati protettivi prima del montaggio, onde evitare l'ossidazione e il conseguente bloccaggio delle parti.
- Prima della messa in servizio del riduttore accertarsi che la macchina che lo incorpora sia in regola con le disposizioni della Direttiva Macchine 2006/42/CE e successivi aggiornamenti.
- Prima della messa in funzione della macchina, accertarsi che la posizione del livello del lubrificante sia conforme alla posizione di montaggio del riduttore e che la viscosità sia adeguata al tipo di applicazione.
- Nel caso di installazione all'aperto prevedere adeguate protezioni e/o carterature allo scopo di evitare l'esposizione diretta agli agenti atmosferici e alla radiazione solare.

5 LUBRIFICAZIONE

Si consiglia di consultare il Manuale d'Uso e Manutenzione disponibile al sito www.bonfiglioli.com per le indicazioni sui controlli periodici del livello dell'olio e sulla sua sostituzione.

Evitare di miscelare oli a base minerale con oli sintetici e/o marche differenti.

È buona norma comunque controllare il livello una volta al mese per funzionamento intermittente, o più frequentemente, per funzionamento in continuo, e aggiungere olio se necessario.

5.1 Scelta della viscosità ottimale dell'olio (dati riferiti ad oli Shell)

		Temperatura ambiente di lavoro [C°]																			
		-40	-35	-30	-25	-20	-15	-10	-5	0	+5	+10	+15	+20	+25	+30	+35	+40	+45	+50

□ Limiti di impiego consigliati.

Ⓢ Limiti di impiego consentiti. Ⓢ

⊘ Limiti di impiego non consentiti.

* = Si suggerisce un avviamento graduale e prevedere un maggior assorbimento del motore.

Se necessario e/o nel caso di carichi impulsivi, contattare il Servizio Tecnico Bonfiglioli Ⓢ

5.2 Lubrificazione per riduttori HDP-HDO

Gli organi interni dei riduttori HDP sono lubrificati con un sistema misto ad immersione e sbattimento dell'olio. Per velocità in uscita inferiori a 1 min^{-1} o in ingresso superiori a 1800 min^{-1} , consultare preventivamente il Servizio Tecnico di Bonfiglioli. Nella posizione di montaggio V5 i cuscinetti superiori dei gruppi da HDP 60 a HDP 90 sono lubrificati con grasso e dotati di anello di ritegno Nilos, salvo che in fase d'ordine sia specificato un sistema di lubrificazione forzato tramite pompa meccanica (variante opzionale OP1, OP2) o motopompa (opzione MOP). I riduttori HDP delle grandezze da 100 a 180 qualora siano richiesti nella posizione di montaggio V5, con albero lento verticale, richiedono invariabilmente la specifica di uno dei sistemi di lubrificazione forzata sopra menzionati, da selezionare in funzione della velocità e/o delle condizioni di esercizio. I riduttori sono forniti privi di lubrificante e sarà cura del Cliente immettere, prima della messa in opera, la quantità di olio appropriata.

Gli organi interni dei riduttori HDO sono lubrificati con un sistema misto ad immersione e sbattimento dell'olio. Per velocità in uscita inferiori a 1 min^{-1} o in ingresso superiori a 1800 min^{-1} , consultare preventivamente il Servizio Tecnico di Bonfiglioli. Nelle posizioni di montaggio V5 e B6 i cuscinetti superiori dei gruppi da HDO 71 a HDO 95 sono lubrificati con grasso e dotati di anello di ritegno Nilos.

I riduttori HDO delle grandezze da 100 a 180, qualora siano richiesti nelle posizioni di montaggio V5 e B6, richiedono che in fase d'ordine sia specificato un sistema di lubrificazione forzato tramite pompa meccanica (variante opzionale OP1, OP2) o motopompa (opzione MOP).

In funzione poi della specifica configurazione e posizione di montaggio, tutti i riduttori HDO possono richiedere l'uso di uno dei sistemi di lubrificazione forzata che sono descritti più avanti in questo catalogo. I riduttori sono forniti privi di lubrificante e sarà cura del Cliente immettere, prima della messa in opera, la quantità di olio appropriata.

6 STOCCAGGIO

Il corretto stoccaggio dei prodotti richiede l'esecuzione delle seguenti attività:

- Escludere aree all'aperto, zone esposte alle intemperie o con eccessiva umidità.
- Interporre sempre tra il pavimento ed i prodotti, pianali lignei o di altra natura, atti ad impedire il diretto contatto col suolo.
- Per periodi di stoccaggio e soste prolungate le superfici interessate agli accoppiamenti quali flange, alberi e giunti devono essere protette con idoneo prodotto antiossidante (Tectile 506 EH o equivalente).

In questo caso i riduttori dovranno essere posizionati con il tappo di sfiato nella posizione più alta e riempiti interamente d'olio.

Prima della loro messa in servizio nei riduttori dovrà essere ripristinata la corretta quantità, e il tipo di lubrificante.

7 CONDIZIONI DI FORNITURA

I riduttori vengono forniti come segue:

- già predisposti per essere installati nella posizione di montaggio come definito in fase di ordine;
- collaudati secondo specifiche interne;
- superfici di accoppiamento non verniciate
- provvisti di bulloneria per la flangiatura del motore (se la predisposizione a standard IEC è specificata).

8 VERNICIATURA

La verniciatura esterna ed interna dei gruppi HDP delle grandezze da 60 a 90 e HDO delle grandezze da 71 a 95 è realizzata con polvere termoindurente a base di resine epossidiche e poliestere. Nelle zone verniciate (ferrose) rispettano come requisito minimo la classe di protezione C2 (UNI EN ISO 12944-2). Colore grigio RAL 7042. Può essere in seguito sovraverniciata con vernici sintetiche. I gruppi HDP e HDO 100 ... 180 sono verniciati a spruzzo con mano di primer epossidico sia internamente che esternamente, seguita da una verniciatura esterna a riduttore finito. Rispettano come requisito minimo la classe di protezione C3 (UNI EN ISO 12944-2). Colore grigio RAL 7042.

9 FATTORE DI SERVIZIO

I fattori di servizio elencati qui di seguito sono valori empirici basati su specifiche emesse dalle Norme ISO e AGMA e dalla conoscenza maturata dal costruttore in lunghi anni di attività nell'industria. Essi sono applicabili per macchine progettate e realizzate secondo lo stato dell'arte e operanti in condizioni di funzionamento normali.

Applicazione	≤ 10 ore/giorno	> 10 ore/giorno
AGITATORI, MESCOLATORI		
Liquidi a densità costante	1.25	1.50
Liquidi con solidi in sospensione	1.25	1.50
Liquidi a densità variabile	1.50	1.75
SOFFIANTI		
Centrifughe	1.00	1.25
A lobi	1.25	1.50
A palette	1.25	1.50
CHIARIFICATORI	1.00	1.25
MACCHINE PER LAVORAZIONE DELL'ARGILLA		
Presse per laterizi	1.75	2.00
Presse per formatura piastrelle	1.75	2.00
Impastatrici	1.25	1.50
COMPATTATORI	2.00	2.00

SELEZIONE DEL RIDUTTORE

La compilazione della scheda seguente è obbligatoria per i prodotti in esecuzione ATEX. A garanzia di un corretto dimensionamento del prodotto, è vivamente consigliato ricorrere all'esperienza e alla specifica conoscenza del Servizio Tecnico di Bonfiglioli.

		DATI TECNICI NECESSARI PER LA SELEZIONE DI RIDUTTORI SERIE HDP - HDO				Nr: _____ data: _____ Rev_ _____ data: _____	
A) DATI GENERALI							
#	1	Azienda / Cliente					
#	2	Contatto					
#	3	Filiale / Distributore					
#	4	Quantità in ordine					
	5	Tempi di consegna					
B) MOTORE ELETTRICO							
	6	Tipo di motore					
#	7	P_{n1}	Potenza nominale del motore		[kW]		
#	8	P_{r1}	Potenza richiesta dal motore		[kW]		
	9	n_1	Velocità di ingresso		[min ⁻¹]		
	10	Numero di poli					
	11	Montaggio del motore: B3 - B5 - B14					
C₁) RIDUTTORE				C₂) AMBIENTE ATEX [GROUPE II] - 2014/34/EU			
#	12	Configurazione del riduttore					
#	13	i	Rapporto di riduzione			Categoria: [2 = standard / 3 = speciale]	
#	14	n_2	Velocità di uscita	[min ⁻¹]	Atmosfera: [G = gas / D = polvere]		
#	15	M_{r2}	Coppia richiesta in uscita	[Nm]	Zona: [1 - 21 / 2 - 22]		
#	17	f_s	Fattore di servizio richiesto			Classe di temperatura: [T4 / 135°C]	
	18	Senso di rotazione dell'albero di uscita [vista frontale]:		CW		CCW	
#	19	L_{10H}	Durata dei cuscinetti		[h]		
	20	Durata ingranaggi			[h]		
	21	SF_{min}	Sicurezza a piede dente	standard di riferimento (ISO preferito)			
	22	SH_{min}	Sicurezza a fianco dente	standard di riferimento (ISO preferito)			
D) CARICHI SUPPLEMENTARI							
	23	R_{c2}	Carico radiale su albero in uscita		[N]	 Posizione angolare α° R_c A_{n2} A_{n1} x_2 x_1 + = Spinta - = Tiro	
	24	x_2	Distanza di applicazione del carico dalla battuta dell'albero		[mm]		
	25	α_{Rc2}	Angolo di applicazione del carico radiale in uscita		[° ' '']		
	26	R_{c1}	Carico radiale su albero in entrata		[N]		
	27	x_1	Distanza di applicazione del carico dalla battuta dell'albero		[mm]		
	28	α_{Rc1}	Angolo di applicazione del carico radiale in ingresso		[° ' '']		
	29	A_{n2}	Carico assiale su albero in uscita (+ / -)		[N]		
	30	A_{n1}	Carico assiale su albero di ingresso (+ / -)		[N]		
E) APPLICAZIONE							
#	31	Tipo di applicazione					
	32	Ciclo di lavoro		Tempo della fase	Tempo della fase	Coppia di uscita del riduttore	Velocità di uscita del riduttore
				%	ore	[Nm]	[min ⁻¹]
				5555	5555		
				5555	5555		
				5555	5555		
				5555	5555		
				5555	5555		
	33	Note sul Ciclo di lavoro:					
		Tipo di servizio		S1	S2	S3	S4-S8
	34	v_A	Velocità di aria nell'ambiente	[m/s]	≤ 0.5	> 0.5 ≤ 1.4	> 1.4
#	35	t_a	Campo della temperatura ambiente	[°C]			
	36	Altezza sul livello del mare		[m]			
	37	Fattore di servizio secondo classificazione FEM		T-	L-	M-	
F) OPZIONI O RICHIESTE SUPPLEMENTARI							
	38	Lubrificazione					
	39	Sistemi di raffreddamento supplementari					
	40	Vernice di rivestimento					
	41	Richieste specifiche di test					
G) NOTE							
	42	Note e requisiti aggiuntivi richieste dai clienti:					
#	43	Codice PLP se presente per riduttori speciali					
# Obbligatorio per la selezione							

La selezione ottimale della trasmissione può essere condotta solo previa la piena conoscenza delle condizioni applicative, sia di natura funzionale, che ambientale.

10 DIMENSIONAMENTO

1. Determinare il rapporto di trasmissione:

$$i = \frac{n_1}{n_2}$$

2. Calcolare la potenza richiesta P_{r1} all'albero veloce del riduttore:

$$P_{r1} = \frac{M_{r2} \times n_2}{9550 \times \eta}$$

	η
2x 	0.96
3x 	0.94
4x 	0.92

3. Determinare il fattore di servizio f_s applicabile e il fattore correttivo dipendente dal tipo di organo motore f_m :

	f_m
Motore elettrico Motore idraulico Turbina	1.00
Motore a combustione interna pluricilindrico	1.25
Motore a combustione interna monocilindrico	1.50

4. Dalle tabelle dati tecnici selezionare il riduttore con rapporto di trasmissione più prossimo a quello calcolato e caratterizzato da una potenza nominale P_{n1} , tale che:

$$P_{n1} \geq P_{r1} \times f_s \times f_m$$

11 VERIFICHE

11.1 CARICHI IMPULSIVI

In presenza di cicli di lavoro intermittenti, o caratterizzati da urti, avviamenti a pieno carico o elevati carichi inerziali, per il valore di coppia istantanea M_p sviluppata nel ciclo di funzionamento si deve verificare la seguente condizione:

$$M_p \leq M_{n2ref} \times f_p$$

Picchi/ora		f_p				
		1	2 ... 10	11 ... 50	51 ... 100	> 100
Tipo di moto	Direzione costante	2.0 1.8 (HDO 71...95 3x  1.6 (HDO 71...95 4x 	1.6	1.3	1.1	1.0
	Inversioni di moto	1.4 1.3 (HDO 71...95 3x  1.1 (HDO 71...95 4x 	1.1	0.9	0.8	0.7

Per la configurazione S (albero lento con calettatore) eseguire la verifica considerando i seguenti valori.

Picchi/ora		f_p		
		1 ... 50	51 ... 100	> 100
Tipo di moto	Direzione costante	1.3 1.1 (HDP 80) 1 (HDO 81) 1.2 (HDO 95)	1.1 1 (HDO 81)	1.0
	Inversioni di moto	0.9 0.8 (HDP 80 - HDO 95) 0.7 (HDO 81)	0.8 0.7 (HDO 81)	0.7

Se la condizione suddetta non fosse verificata prevedere l'installazione di un dispositivo limitatore di coppia, oppure considerare la selezione di un riduttore di taglia superiore.

11.2 ABBINAMENTO MOTORE

Per il riduttore selezionato verificare la disponibilità della relativa flangia di accoppiamento nelle sezioni [15.5](#) e [26.6](#).

La normalizzazione tipica dei motori elettrici può portare a selezionare un motore caratterizzato da potenza di targa superiore, anche considerevolmente, alla potenza nominale P_{n1} del riduttore che si è dimensionato. Verificare che in nessuna condizione del ciclo di lavoro la maggiore potenza erogabile dal motore elettrico sia effettivamente sviluppata. In presenza di dati di calcolo incerti, o di dubbi sull'effettivo diagramma di carico dell'applicazione è consigliabile installare un dispositivo limitatore di coppia.

11.3 DISPOSITIVO ANTI-RITORNO

Se il riduttore è specificato con dispositivo anti-ritorno, verificare la capacità di carico di quest'ultimo nelle relative sezioni 15.6.3 e 26.7.3 di questo catalogo e assicurarsi che il valore di coppia massima M_{1MAX} non sia mai trasmesso al riduttore durante il suo funzionamento.

11.4 FORZA RISULTANTE SULL'ALBERO

Organi di trasmissione calettati sugli alberi di ingresso e/o di uscita del riduttore generano forze la cui risultante agisce in senso radiale sull'albero stesso.

L'entità di questi carichi deve essere compatibile con la capacità di sopportazione del sistema albero-cuscinetti del riduttore, in particolare il valore assoluto del carico applicato (R_{c1} per albero di ingresso, R_{c2} per albero di uscita) deve essere inferiore al valore nominale (R_{x1} per albero di ingresso, R_{x2} per albero di uscita) riportato nelle tabelle dati tecnici. Il procedimento descritto si applica indifferentemente all'albero veloce o all'albero lento avendo l'avvertenza di utilizzare i coefficienti K_1 o K_2 , in funzione dell'albero interessato alla verifica.

Il carico generato da una trasmissione esterna può essere calcolato, con buona approssimazione, tramite la formula seguente:

$$R_c = \frac{2000 \times M \times K_r}{d}$$

$K_r = 1$		$M [Nm]$	
$K_r = 1.25$		$d [mm]$	
$K_r = 1.5 - 2.0$			

11.5 VERIFICA SOPPORTAZIONE RADIALE

I valori $R_{n1 \max}$ riportati in tabella sono i carichi radiali massimi ammissibili; essi possono subire delle limitazioni in funzione delle condizioni applicative.

Per un calcolo puntuale contattare il Servizio Tecnico Bonfiglioli.

11.6 CARICHI AGENTI SUGLI ALBERI

11.6.1 Carichi albero lento

Per le condizioni di carico radiale applicate agli alberi, verificare che le forze agenti esternamente non superino quelle ammissibili per il riduttore. Per carichi esterni particolarmente gravosi, unicamente per i gruppi HDP 60...HDP 90 e HDO 71...HDO 91, sono disponibili cuscinetti con capacità di carico maggiorata, specificabili mediante l'opzione HDB. Se le forze esterne eccedessero anche la capacità di carico dei cuscinetti rinforzati, considerare l'ipotesi di supportazione esterna degli alberi, la riduzione dei carichi esterni o, eventualmente, la selezione di un riduttore di taglia superiore.

Per verificare la supportazione radiale riferirsi allo schema illustrato al paragrafo 11.5 e confrontare la forza radiale **R_c** gravante sull'albero con il carico ammissibile **R_x** corrispondente alla distanza di applicazione della forza stessa dalla mezzeria dell'albero. Il carico ammissibile **R_{x2}** per l'albero lento si ricava moltiplicando il valore nominale **R_{n2}**, reperibile nelle tabelle dati tecnici, per il coefficiente di spostamento **K₂**.

I carichi radiali nominali **R_n** sono relativi alle condizioni di calcolo più sfavorevoli in quanto a verso di rotazione e angolo di applicazione della forza, e rappresentano pertanto un valore conservativo. La seguente tabella presenta i carichi radiali nominali applicabili all'albero lento pieno (LP) validi nelle seguenti condizioni:

- punto di applicazione della forza al centro dell'estremità dell'albero
- assenza di carichi assiali
- fattore di servizio del riduttore ≥ 1.25

Per un calcolo puntuale consultare il Servizio Tecnico di Bonfiglioli Riduttori.

Per condizioni di carico differenti, come:

- elevati carichi radiali
- carichi assiali
- carichi assiali e radiali combinati
- diverse configurazioni dell'albero lento

consultare il Servizio Tecnico di Bonfiglioli Riduttori

11.6.2 Carichi radiali e assiali albero veloce

Per verificare la sopportazione radiale riferirsi allo schema illustrato al paragrafo 11.5 e confrontare la forza radiale **R_c** gravante sull'albero con il carico ammissibile **R_x** corrispondente alla distanza di applicazione della forza stessa dalla mezzeria dell'albero. Il carico ammissibile **R_{x1}** per l'albero veloce si ricava moltiplicando il valore nominale **R_{n1}**, reperibile nelle tabelle dati tecnici, per il coefficiente di spostamento **K₁**.

I carichi radiali nominali **R_n** sono relativi alle condizioni di calcolo più sfavorevoli in quanto a verso di rotazione e angolo di applicazione della forza, e rappresentano pertanto un valore conservativo. Per un calcolo puntuale, o in caso di HDP 4 stadi con albero bisorgente (LD, RD e DD), consultare il Servizio Tecnico di Bonfiglioli Riduttori. Congiuntamente al carico radiale è applicabile un carico assiale **A_{n1} ≤ 0.2 x R_{n1}**.

Per i riduttori HDP in esecuzione con albero bisorgente il carico radiale ammissibile è riferito all'estremità evidenziata in nero nello schema seguente:

HDP			2x 	3x 	4x 
LL 	LR 	LD 			
RL 	RR 	RD 			
DL 	DR 	DD 			

Per carichi radiali agenti su entrambe le sporgenze d'albero consultare il Servizio Tecnico di Bonfiglioli Riduttori.

11.7 POTENZA TERMICA

La potenza termica P_T è il valore massimo di potenza che può essere trasmessa meccanicamente dal riduttore, in funzionamento continuo, senza che si produca al suo interno un aumento di temperatura tale da provocare il danneggiamento degli organi principali.

Nelle seguenti condizioni operative:

- posizione di montaggio B3, con riduttore fissato su superficie metallica
- funzionamento continuo
- installazione in ampi spazi (velocità aria > 1.4 m/s)
- altitudine max 1000 m

i valori di potenza termica complessiva e i valori di potenza termica comprensiva del contributo fornito dagli eventuali dispositivi di ausilio termico, sono riportati nei capitoli 17 e 28.

Per condizioni diverse contattare il Servizio Tecnico Bonfiglioli.

Il valore così determinato deve essere maggiore del valore di potenza Pr_1 richiesto all'albero veloce del riduttore, la seguente espressione deve essere pertanto verificata:

$$P_{T...} \geq Pr_1$$

12 CASI APPLICATIVI

	Dati dell'applicazione	
	$n_1 = 1500 \text{ min}^{-1}$	$f_s = 1.5$
	$n_2 = 83 \text{ min}^{-1}$	$Mr_2 = 7850 \text{ Nm}$
	Posizione di montaggio: B3	
	Parametri ambientali	
	Temperatura ambiente	$= 40^\circ\text{C}$
	Installazione in ampi spazi	

Selezione del prodotto:

$$\text{a) } i = \frac{n_1}{n_2} = \frac{1500}{83} \approx 18.1$$

$$\text{b) } Pr_1 = \frac{Mr_2 \times n_2}{9550 \times \eta} = \frac{7850 \times 83}{9550 \times 0.96} \approx 71.1 \text{ kW}$$

$$\text{c) } Pn_1 \geq Pr_1 \cdot f_s \approx 106.6 \text{ kW}$$

HDP 80 2 18.0 LP LR VP B3

[$Pn_1 = 108.7 \text{ kW @ } n_1 = 1500 \text{ min}^{-1}$]

Verifica potenza termica:

$$P_T = 55 \text{ kW} < Pr_1 = 71.1 \text{ kW}$$

Soluzione 1

- Ventilazione forzata

$$P_{TFANL/R} = 76 \text{ kW @ } n_1 = 1500 \text{ min}^{-1}$$

$$P_{TFANL/R} > Pr_1$$

✓ OK

Soluzione 2

- Serpentina di raffreddamento

$$P_{TSR} = 96 \text{ kW @ } n_1 = 1500 \text{ min}^{-1}$$

$$P_{TSR} > Pr_1$$

✓ OK

	Dati dell'applicazione	
	$n_1 = 1500 \text{ min}^{-1}$	$f_s = 1.5$
	$n_2 = 120 \text{ min}^{-1}$	$Mr_2 = 13500 \text{ Nm}$
	Posizione di montaggio: B3	
	Parametri ambientali	
	Temperatura ambiente	$= 40^\circ\text{C}$
Installazione in ampi spazi		

Selezione del prodotto:

a) $i = \frac{n_1}{n_2} = \frac{1500}{120} = 12.5$ b) $Pr_1 = \frac{Mr_2 \times n_2}{9550 \times \eta} = \frac{13500 \times 120}{9550 \times 0.96} \approx 176.7 \text{ kW}$ c) $Pn_1 \geq Pr_1 \cdot f_s \approx 265.1 \text{ kW}$

HDO 110 2 12.5 LP L 1 VP B3

$[Pn_1 = 329.4 \text{ kW @ } n_1 = 1500 \text{ min}^{-1}]$

Verifica potenza termica:

$$P_T = 52 \text{ kW} < Pr_1 = 176.7 \text{ kW}$$

Soluzione 1

- Centralina di raffreddamento con
scambiatore aria/olio

$$P_{\text{TMCR}A9} = 184 \text{ kW @ } n_1 = 1500 \text{ min}^{-1}$$

$$P_{\text{TMCR}A9} > Pr_1$$

✓ OK

Soluzione 2

- Centralina di raffreddamento con
scambiatore acqua/olio

$$P_{\text{TMCR}W5} = 250 \text{ kW @ } n_1 = 1500 \text{ min}^{-1}$$

$$P_{\text{TMCR}W5} > Pr_1$$

✓ OK

RIDUTTORI IN ESECUZIONE ATEX

13 INTRODUZIONE ALLE DIRETTIVE ATEX

13.1 Atmosfera esplosiva

Ai fini della direttiva 2014/34/UE si intende per **atmosfera esplosiva** quella costituita da una miscela:

- a. di **sostanze infiammabili** allo stato di gas, vapori, nebbie o polveri;
- b. con **aria**;
- c. in determinate condizioni atmosferiche;
- d. in cui, dopo l'innesco, la combustione si propaga all'insieme della miscela incombusta (occorre notare che soprattutto in presenza di polvere, non sempre l'intera quantità di combustibile viene consumata dalla combustione).

Un'atmosfera suscettibile di trasformarsi in atmosfera esplosiva a causa delle condizioni locali e/o operative è definita **atmosfera potenzialmente esplosiva**. È solo a questo tipo di atmosfera potenzialmente esplosiva che sono destinati i prodotti oggetto della direttiva 2014/34/UE.

13.2 Norme europee armonizzate atex

La direttiva 2014/34/UE descrive i requisiti minimi di sicurezza per i prodotti destinati all'uso in zone a rischio di esplosione, all'interno dei paesi dell'Unione Europea. La direttiva assegna inoltre questi apparecchi a **categorie**, definite dalla direttiva stessa.

Segue uno schema descrittivo delle **zone** in cui il conduttore di un impianto caratterizzato dalla presenza di atmosfera potenzialmente esplosiva deve suddividere le aree di applicazione delle apparecchiature.

Zone		Frequenza della formazione di atmosfera potenzialmente esplosiva	Tipo di pericolo
Atmosfera gassosa G	Atmosfera polverosa D		
0	20	Presenza costante o per lunghi periodi	Permanente
1	21	Occasionale in funzionamento normale	Potenziiale
2	22	Molto rara e/o di breve durata in funzionamento normale	Minimo

I riduttori di produzione BONFIGLIOLI RIDUTTORI selezionati dal presente catalogo sono marcati per installazione nelle zone 1, 21, evidenziate in grigio chiaro nello schema soprastante e risultano idonei anche per installazione in zone con livello di protezione più basso (zone 2 e 22).

A partire dal 20 Aprile 2016 la direttiva 2014/34/UE si applica su tutto il territorio dell'Unione Europea sostituendo le leggi divergenti attualmente in vigore a livello nazionale ed europeo in materia di atmosfera esplosiva e la precedente direttiva ATEX 94/9/CE.

Le direttive si applicano agli apparecchi di natura meccanica, idraulica e pneumatica.

13.3 Livelli di protezione per le varie categorie di apparecchi

Le varie categorie di apparecchi devono essere in grado di funzionare conformemente ai parametri operativi stabiliti dal fabbricante, a determinati livelli di protezione.

La disponibilità di prodotti BONFIGLIOLI RIDUTTORI è evidenziata dalle celle in colore grigio.

Livello di protezione	Categoria		Tipo di protezione	Condizioni di funzionamento
	Gruppo I	Gruppo II		
Molto elevato	M1		Due mezzi di protezione indipendenti o sicurezza garantita anche qualora si manifestino due guasti indipendenti uno dall'altro	Gli apparecchi restano alimentati e in funzione anche in presenza di atmosfera esplosiva
Molto elevato		1	Due mezzi di protezione indipendenti o sicurezza garantita anche qualora si manifestino due guasti indipendenti uno dall'altro	Gli apparecchi restano alimentati e in funzione nelle zone 0, 1, 2 (G) e/o nelle zone 20, 21, 22 (D)
Elevato	M2		Protezione adatta al funzionamento normale e a condizioni di funzionamento gravose	Agli apparecchi viene interrotta l'alimentazione in presenza di atmosfera potenzialmente esplosiva
Elevato		2	Protezione adatta al funzionamento normale e a disturbi frequenti o apparecchi in cui si tenga normalmente conto dei guasti	Gli apparecchi restano alimentati e in funzione nelle zone 1, 2 (G) e/o nelle zone 21, 22 (D)
Normale		3	Protezione adatta al funzionamento normale	Gli apparecchi restano alimentati e in funzione nelle zone 2 (G) e/o 22 (D)

13.4 Definizione dei gruppi

Gruppo I Comprende gli apparecchi destinati a essere utilizzati nei lavori in sotterraneo nelle miniere e nei loro impianti di superficie, esposti al rischio di sprigionamento di grisù e/o polveri combustibili.

Gruppo II Comprende gli apparecchi destinati a essere utilizzati in altri ambienti in cui vi sono probabilità che si manifestino atmosfere esplosive.

È esclusa qualunque installazione di apparecchi BONFIGLIOLI RIDUTTORI in applicazioni minerarie, classificabili come **gruppo I** e **gruppo II**, categoria 1.

In sintesi, l'insieme di classificazioni degli apparecchi in gruppi, categorie e zone può essere rappresentato dallo schema seguente, nel quale la disponibilità di prodotti BONFIGLIOLI RIDUTTORI è ancora evidenziata dalle celle in colore grigio.

Gruppo	I		II					
	miniere, grisù		altre aree potenzialmente esplosive per presenza di gas o polveri					
Categoria	M1	M2	1		2		3	
Atmosfera ⁽¹⁾			G	D	G	D	G	D
Zona			0	20	1	21	2	22
Tipo di protezione riduttore ⁽²⁾					Ex h Gb	Ex h Db	Ex h Gc	Ex h Dc

⁽¹⁾ G = gas D = polvere

⁽²⁾ secondo EN 80079-36 e EN 80079-37

13.5 Dichiarazione di conformità

La Dichiarazione di Conformità, è il documento che attesta la conformità del prodotto alla direttiva 2014/34/UE.

La validità del certificato è legata al rispetto delle istruzioni che sono specificate nel Manuale d'uso, installazione e manutenzione per l'uso in sicurezza del prodotto, in tutte le fasi della sua vita attiva. L'utente è invitato a dotarsene scaricandolo all'indirizzo www.bonfiglioli.com dove il Manuale è disponibile in diverse lingue e nel formato pdf.

Di particolare rilievo sono le prescrizioni relative alle condizioni ambientali che, se non rispettate in condizione di funzionamento, fanno decadere la validità del certificato stesso.

In caso di dubbio sulla validità della Dichiarazione di Conformità contattare il servizio tecnicocommerciale di BONFIGLIOLI RIDUTTORI.

RIDUTTORI AD ASSI PARALLELI SERIE HDP

14 CARATTERISTICHE COSTRUTTIVE

HDP

Le principali caratteristiche costruttive della serie di riduttori ad assi paralleli HDP sono:

- grandezze da HDP 60 a HDP 90 a 2 e 3 stadi di riduzione
- grandezze da HDP 100 a HDP 180 a 2, 3 e 4 stadi di riduzione.
- Valori di coppia nominale con distribuzione favorevole su tutto l'arco dei rapporti.
- Rapporti di trasmissione con progressione costante del 12%.
- HDP 60 ... HDP 125: Cassa monoblocco in ghisa sferoidale, rigida, resistente e precisa, verniciata internamente ed esternamente. Fissaggio universale grazie alle numerose superfici lavorate e forate. Forme e spessori ottimizzati mediante l'analisi FEM garantiscono elevata rigidezza strutturale e ridotte emissioni acustiche.
- HDP 130 ... HDP 180: Cassa in ghisa sferoidale o di acciaio composto elettrosaldato realizzata in due semigusci, con piano di separazione complanare agli assi. L'architettura consente di realizzare interventi di manutenzione in maniera efficace ed economica. Forme e spessori ottimizzati mediante l'analisi FEM garantiscono elevata rigidezza strutturale e ridotte emissioni acustiche.
- Ingranaggi elicoidali in acciaio legato, cementati e temprati, con correzione del profilo per:
 - ridurre la rumorosità e favorire la regolarità della trasmissione degli ingranaggi veloci
 - massimizzare la coppia trasmissibile delle riduzioni finali
- Alberi veloci generalmente cementati e rettificati e alberi lenti in acciaio da bonifica di elevata rigidezza.

- Configurazioni alberi veloci:
 - HDP 60 ... HDP 180: albero cilindrico, a semplice o doppia sporgenza, con estremità secondo UNI/ISO 775-88
 - HDP 60 ... HDP 90: predisposizione per attacco diretto al motore oppure tramite giunto elastico di collegamento.
 - HDP 100 ... HDP 180: predisposizione motore mediante campana di collegamento e giunto elastico.
- Configurazioni alberi lenti:
 - albero cilindrico integrale, a singola o doppia sporgenza, con estremità secondo UNI/ISO 775-88
 - albero cavo con sede per linguetta
 - albero cavo con calettatore
- Cuscinetti delle primarie marche del tipo a rulli conici oppure orientabili a rulli largamente dimensionati e idonei a sopportare elevati carichi esterni.
- Numerose possibilità di personalizzazione del riduttore tramite le opzioni a richiesta, fra le quali:
 - dispositivi termici di raffreddamento / riscaldamento ausiliari
 - sistemi di lubrificazione forzata
 - dispositivo antiretro
 - flangie di fissaggio, o a manicotto
 - cuscinetti per sopportazione radiale maggiorata (solo per HDP 60 ... HDP 90)
 - tenute e guarnizioni di diverso tipo e materiale
 - sensori
 - dispositivo dry-well per installazioni con albero verticale
 - organi di fissaggio

15 CONFIGURAZIONI PRODOTTO

15.1 VARIANTI BASE

HDP

15.2 VARIANTI OPZIONALI

NOTA: La selezione combinata di alcune varianti può comportare conflitti di natura tecnica o dimensionale. Consultare la fabbrica per una verifica puntuale.

15.3 POSIZIONI DI MONTAGGIO

B3	B6	B7	V5
			
 HDP 170, HDP 180			

15.4 CONFIGURAZIONE LATO INGRESSO E USCITA

15.4.1 CONFIGURAZIONE ALBERO LENTO

LP	H	S
		

15.4.2 CONFIGURAZIONE PARTE VELOCE

Per l'azionamento da parte dell'organo motore il lato veloce del riduttore può essere configurato con:

- **Albero cilindrico**, a semplice o doppia sporgenza – Specificare **VP**
- **Flangiatura per accoppiamento diretto** ad un motore elettrico normalizzato in forma costruttiva IM B5. L'allestimento è unicamente disponibile per i gruppi HDP 60...HDP 90 nell'esecuzione a tre stadi di riduzione – Specificare **AD**.
- **Flangiatura con campana attacco motore IEC o NEMA e interposizione di un giunto elastico** fra gli alberi cilindrici di motore e riduttore. Questa opzione assume la denominazione **GL/NGL** o **GR/NGR** in dipendenza del lato del riduttore su cui è richiesta la predisposizione. Il giunto elastico è parte della fornitura.

15.5 PREDISPOSIZIONI MOTORE

Le tabelle che seguono riportano gli abbinamenti motore/riduttore che sono possibili in termini puramente geometrici. La variante è attiva se si è precedentemente specificato una configurazione veloce del tipo AD (attacco diretto), oppure GL/NGL - GR/NGR (attacco mediante giunto elastico e campana motore IEC o NEMA).

La normalizzazione tipica dei motori elettrici può portare a selezionare un motore caratterizzato da potenza di targa superiore alla potenza nominale P_{n1} del riduttore che si è dimensionato. Verificare che in nessuna condizione del ciclo di lavoro la maggiore potenza erogabile dal motore elettrico sia effettivamente sviluppata. In presenza di dati di calcolo incerti, o di dubbi sull'effettivo diagramma di carico dell'applicazione è consigliabile installare un dispositivo limitatore di coppia.

15.6 VARIANTI OPZIONALI

15.6.1 DISPOSITIVI TERMICI AUSILIARI

15.6.1.1 VENTILAZIONE FORZATA

Una maggiore capacità di dissipazione termica è ottenibile mediante l'uso di ventole di raffreddamento che sono calettate sull'albero veloce del riduttore. Per i riduttori HDP 60 ... HDP 90, ad esclusione delle configurazioni LD – RD – DD, e per i riduttori HDP 100 ... HDP 160 in configurazione GL/NGL o GR/NGR, è possibile richiedere il montaggio di una ventola unicamente sulla parte opposta al lato di comando specificando la sigla **FANL** o **FANR**.

Per i riduttori HDP 100 ... HDP 160 in configurazione VP, la ventola si può specificare sul lato destro o sinistro indipendentemente dalla presenza dell'albero di comando. Per questi ultimi riduttori è anche possibile sfruttare la maggiore capacità di raffreddamento fornita da due ventole specificando la sigla **FANLR** nell'ordinativo.

Per i riduttori HDP 170 e HDP 180, le ventole standard sono di tipo assiale con profilo alare.

La specifica della relativa opzione designata **FANL** o **FANR**, deve essere necessariamente completata dall'indicazione del verso di rotazione dell'albero lento (CW oppure CCW), secondo le convenzioni riportate al paragrafo [15.6.3](#).

L'opzione non è disponibile in abbinamento con altre configurazioni che impegnano la medesima estremità d'albero e con la variante opzionale MOP (lubrificazione forzata con motopompa).

L'effetto della maggiore capacità di dissipazione è rappresentato dal valore di potenza termica P_{TFAN} , rilevabile nel capitolo: [17](#).

L'efficienza della ventilazione forzata si riduce grandemente al di sotto di velocità di comando $n_1 = 900 \text{ min}^{-1}$. In questo caso per incrementare la potenza termica del riduttore è consigliabile ricorrere ad altri sistemi di raffreddamento ausiliari.

15.6.1.2 RAFFREDDAMENTO MEDIANTE SERPENTINA

La serpentina di scambio – opzione **SR** – è prevista per essere integrata in un circuito di raffreddamento la cui realizzazione è a cura dell'installatore.

Per una resa ottimale, il circuito di alimentazione, deve corrispondere alle seguenti specifiche:

- pressione max 8 bar
- portata min 5 l/min per HDP 60 ... HDP 90
- portata min 10 l/min per HDP 100 ... HDP 140
- temperatura acqua max 20°C

In queste condizioni l'effetto della maggiore capacità di dissipazione termica è rappresentato dal valore di potenza termica P_{TSR} , rilevabile nel capitolo 17

15.6.1.3 RAFFREDDAMENTO AUSILIARIO MEDIANTE CENTRALINA AUTONOMA

Sono offerte in opzione due tipi di centraline, ognuna delle quali in più taglie corrispondenti a diverse capacità di raffreddamento, che sfruttano un diverso mezzo di raffreddamento dell'olio, MCRW... – dotata di scambiatore acqua/olio e MCRA... – con scambiatore aria/olio.

Quando si ricorre ad una centralina autonoma di raffreddamento, previa verifica del Servizio Tecnico Bonfiglioli, non è necessario specificare un ulteriore dispositivo di lubrificazione forzata, vedi paragrafo 15.6.2. La disponibilità del dispositivo è evidenziata nella tabella seguente per ciascuna taglia di riduttore. La selezione dovrà tenere conto del deficit di potenza termica da colmare mediante il contributo indicato come P_{TMCRW} o $P_{TM CRA}$ nella tabella del capitolo 17.

	MCRW5 MCRA5	MCRW9 MCRA9	MCRW21 MCRA21	MCRW34 MCRA34	MCRW51 MCRA51	MCRW70 MCRA70

HDP 130	X	X	X	X (**)		
HDP 140	X	X	X	X (**)		
HDP 150	X	X	X	X	X (**)	
HDP 160	X	X	X	X	X (**)	
HDP 170	 BONFIGLIOLI TECHNICAL SERVICE					
HDP 180						

(*) non disponibile per la posizione di montaggio B3.

(**) non disponibile per i riduttori a due stadi in posizione di montaggio B3

I componenti principali delle centraline sono:

MCRW...

- 1) Motopompa con circuito di by-pass
- 2) Filtro con indicatore di intasamento visivo
- 3) Scambiatore di calore acqua / olio
- 4) Pressostato di minima (presente solo in caso di lubrificazione forzata)
- 5) Termostato di massima
- 6) Termostato d'inserzione
- 7) Elettrovalvola

MCRA...

- 1) Motopompa con circuito di by-pass
- 2) Filtro con indicatore di intasamento visivo
- 3) Scambiatore di calore aria / olio con termostato
- 4) Pressostato di minima (presente solo in caso di lubrificazione forzata)
- 5) Termostato di massima

Avvertenze di carattere generale:

MCRW... : prevedere un circuito di alimentazione dell'acqua che rispetti le seguenti specifiche:

- pressione max 10 bar
- temperatura di mandata max 20°C
- portata minima Q_{H_2O} come da tabella:

	MCRW5	MCRW9	MCRW21	MCRW34	MCRW51	MCRW70
Q_{H_2O} [l/min]	10	18	31	56	81	 BONFIGLIOLI TECHNICAL SERVICE

MCRA... : lasciare adeguato spazio libero attorno allo scambiatore per garantire un flusso d'aria non impedito.

Le centraline sono installate sui riduttori come rappresentato nello schema sotto riportato.

15.6.1.4 RESISTENZA DI PRERISCALDO

Con temperature ambientali molto basse può essere necessario pre-riscaldare il lubrificante nel carter prima dell'avviamento e/o durante il funzionamento. L'opzione **HE** prevede l'installazione di una resistenza elettrica e la fornitura a corredo di un termostato per segnalare il raggiungimento della temperatura minima richiesta per un corretto funzionamento. Il cablaggio di quest'ultimo è a cura dell'installatore.

15.6.2 LUBRIFICAZIONE A GRASSO

I riduttori delle grandezze HDP 60 ... HDP 90 in posizione di montaggio V5 vengono forniti con i cuscinetti superiori (non immersi nell'olio) lubrificati a grasso e non necessitano di manutenzione periodica.

15.6.2.1 LUBRIFICAZIONE FORZATA

I riduttori delle grandezze HDP 60 ... HDP 90 in posizione di montaggio V5 normalmente forniti con i cuscinetti superiori (non immersi nell'olio) lubrificati a grasso possono essere forniti a richiesta con un circuito di lubrificazione forzata per la lubrificazione degli stessi.

Condizioni di applicazione OPZIONALE dei dispositivi di lubrificazione forzata.

	B3	B6	B7	V5
HDP 60 ... HDP 90	●	●	●	OP... MOP

I riduttori delle grandezze HDP 100 ... HDP 180 in posizione di montaggio V5 vengono forniti con i cuscinetti superiori non immersi nell'olio e lubrificati attraverso un circuito di lubrificazione forzata per la lubrificazione degli stessi.

Condizioni di applicazione OBBLIGATORIA dei dispositivi di lubrificazione forzata.

	B3	B6	B7	V5
HDP 100 ... HDP 180	●	●	●	OP... MOP

Nota: Tutti i dispositivi di lubrificazione forzata sopra riportati possono essere sostituiti, previa verifica del Servizio Tecnico Bonfiglioli, dalle centraline autonome di raffreddamento tipo MCR...

15.6.2.2 POMPA

Per servizi di tipo continuo e installazioni nella posizione di montaggio V5 è fornibile a richiesta un circuito di lubrificazione forzata con pompa calettata sull'estremità opposta dell'albero di comando. Il circuito garantisce la lubrificazione dei cuscinetti superiori. In fase di ordinativo specificare il tipo di pompa - **OP1** oppure **OP2** - in funzione della velocità di comando n_1 , vedi schema seguente.

	$n_1 = 1000 \text{ min}^{-1}$	$n_1 = 1200 \text{ min}^{-1}$	$n_1 = 1500 \text{ min}^{-1}$

		H	⊖	VP GR AD	⊖
		S	⊖	VP GR AD	⊖

15.6.2.3 MOTOPOMPA

Per servizi di tipo intermittente e installazioni nella posizione di montaggio V5 è fornibile a richiesta un circuito di lubrificazione forzata con motopompa alimentata autonomamente - opzione **MOP**. Il circuito garantisce una portata costante di olio in corrispondenza dei cuscinetti superiori. L'opzione non è disponibile in abbinamento alla variante opzionale FAN_

HDP 60 ... HDP 90

		S	VP	VP GR AD	VP GR
HDP 100 ... HDP 180	Nessuna limitazione in funzione delle configurazioni lenta o veloce				

15.6.3 DISPOSITIVO ANTIRETRO

Il dispositivo antiretro garantisce il funzionamento unidirezionale del riduttore e previene il moto retrogrado per effetto del carico collegato all'albero lento. Oltre ad effettuare la verifica ai carichi impulsivi riportati al paragrafo 11.1, è necessario accertarsi che la coppia richiesta al dispositivo antiretro $M_1 = M_2 / (i \times \eta)$ sia inferiore al momento torcente M_{1max} riportato in tabella.

Il dispositivo è calettato sull'estremità dell'albero veloce opposta al lato di comando ed è accessibile dall'esterno per esigenze di facile ispezionabilità.

La specifica della relativa opzione, designata **A**, deve essere necessariamente completata dall'indicazione del verso di rotazione libera dell'albero lento (**CW** oppure **CCW**).

Se particolari condizioni d'uso lo richiedono, il verso di rotazione del dispositivo anti-ritorno può essere variato dall'utente accedendo all'alloggiamento che lo contiene, e invertendo il verso di montaggio della ruota libera. Qualora sia richiesto un intervento di questo tipo contattare il Servizio Tecnico Bonfiglioli per le relative istruzioni.

Il particolare tipo di anti-ritorno, costituito da corpi di contatto a distacco centrifugo, non richiede alcun tipo di manutenzione periodica. L'opzione non è disponibile in abbinamento con altre configurazioni che impegnano la medesima estremità d'albero.

In funzionamento permanente si consiglia di mantenere una velocità di rotazione in folle (sovravanzo) n_{1min} superiore a quella indicata in tabella, al fine di garantire il distacco centrifugo di tutti i corpi preservandoli da fenomeni di usura.

Per ulteriori informazioni contattare Servizio Tecnico Bonfiglioli.

15.6.4 SUPPORTAZIONE RADIALE RINFORZATA

A richiesta sono disponibili cuscinetti di una serie maggiorata, caratterizzati da maggiore capacità di carico radiale. L'opzione HDB è applicabile solo per i gruppi HDP 60 ... HDP 90 dotati di albero lento cilindrico, esecuzione LP.

L'opzione non è disponibile congiuntamente alla variante DW -dry well-.

15.6.5 TENUTE E GUARNIZIONI

A richiesta, i riduttori possono essere dotati di sistemi di tenuta diversi, e in particolare:

TK – In ambienti caratterizzati da presenza di polveri abrasive sono consigliate tenute tipo Taconi-
te costituite da una combinazione di anelli di tenuta, labirinti e camera a grasso. La presenza del
grasso deve essere garantita attraverso operazioni di manutenzione periodica. L'opzione non è
disponibile per HDP 60 ... HDP 90 e su tutte le taglie se abbinata alla variante opzionale "Flange di
fissaggio" (FM escluso).

VS – Dotazione di anelli di tenuta con mescola in fluoro-elastomero.

DS – Dotazione di doppio anello di tenuta su ogni estremità d'albero.

DVS – Dotazione di doppio anello di tenuta con mescola in fluoro-elastomero su ogni estremità
d'albero.

15.6.6 SENSORI

Termostato bimetallico – Su specifica dell'opzione **TG** è fornita una sonda bimetallica termostati-
ca per rilevare quando la temperatura dell'olio supera il valore di $90^{\circ}\text{C} \pm 5^{\circ}\text{C}$. Il dispositivo è fornito
a corredo e l'installazione e il relativo cablaggio elettrico sono a cura dell'installatore.

Controllo livello olio – Su specifica dell'opzione **OLG** in fase di ordinativo è installata una sonda
per il controllo remoto del livello del lubrificante. Il dispositivo è funzionante in condizioni di inattività
del riduttore. Durante il funzionamento dello stesso, il dispositivo deve essere bypassato. Il cablag-
gio è a cura dell'installatore. Il dispositivo può non essere compatibile con altri accessori e/o alcune
configurazioni, contattare il Servizio Tecnico Bonfiglioli.

15.6.7 DRYWELL

Il dispositivo "Drywell", opzione **DW**, garantisce la tenuta dell'albero lento ed è unicamente applicabile
per i riduttori in posizione di montaggio verticale V5. Quando specificato, richiede necessariamente
l'adozione contestuale di un sistema di lubrificazione forzata, selezionato fra quelli disponibili per l'unità
e illustrati nel relativo capitolo di questo catalogo.

Periodicamente, è opportuno verificare/ripristinare la carica di grasso nella camera ricavata sotto al
cuscinetto inferiore dell'albero lento.

La tabella descrive la disponibilità del dispositivo drywell in funzione delle configurazioni lenta e veloce.

15.6.8 ORGANI DI FISSAGGIO

Per i fissaggi di tipo pendolare dei riduttori HDP 60 ... HDP 90 è fornibile a corredo un braccio di reazione, realizzato in acciaio elettrosaldato e dotato di boccola anti-vibrante.

	A [mm]	B [mm]	C [mm]	D [mm]	E [mm]	F [mm]	R [mm]

HDP 80_ TA	60	60	42	97	297	400	60
HDP 90_ TA	60	68	42	113	338	460	68

Per l'identica funzione è fornibile per i riduttori HDP 100 e superiori un bullone in acciaio bonificato e opportunamente sagomato per vincolare il riduttore alla struttura di supporto.

Fanno parte del kit anche le molle a tazza con funzione di smorzamento delle vibrazioni il cui precarico dovrà essere regolato dal Cliente al momento dell'installazione rispettando la quota G indicata nella tabella seguente.

Il bullone di reazione dovrà essere collocato sul lato del riduttore adiacente alla macchina che deve essere azionata e nel foro lontano dall'asse lento del riduttore (vedi quota F indicata nella figura seguente).

Il montaggio dal lato coperchio non è possibile, consultare il Servizio Tecnico Bonfiglioli.

15.6.9 PROTEZIONE SUPERFICIALE

HDP 60 ... 90

I riduttori, che laddove non viene richiesta una classe di protezione specifica, nelle zone verniciate (ferrose) rispettano come requisito minimo la classe di protezione C2 (UNI EN ISO 12944-2), sono forniti con protezione superficiale C3 e C4 per una migliore resistenza alla corrosione atmosferica, ottenute mediante verniciatura del gruppo completo.

HDP 100 ... 180

I riduttori, che laddove non viene richiesta una classe di protezione specifica, nelle zone verniciate (ferrose) rispettano come requisito minimo la classe di protezione C3 (UNI EN ISO 12944-2), sono forniti con protezione superficiale C4 per una migliore resistenza alla corrosione atmosferica, ottenute mediante verniciatura del gruppo completo.

PROTEZIONE SUPERFICIALE	Ambienti tipici	Temperatura superficiale max.	Classe di corrosività secondo UNI EN ISO 12944-2
C3	Ambienti urbani ed industriali, con umidità relativa dell'aria max.100% (inquinamento ambientale medio)	120°C	C3
C4	Aree industriali, zone costiere, impianti chimici, con umidità relativa dell'aria max.100% (inquinamento ambientale alto)	120°C	C4

I riduttori previsti con le protezioni opzionali C3 e C4 sono disponibili in diverse tinte.

Se non specificata nessuna tinta (vedere opzione "VERNICIATURA") la fornitura viene eseguita con la tinta RAL7042.

A richiesta sono fornibili riduttori per classe di corrosività C5 secondo UNI EN ISO 12944-2, contattando il ns. Servizio tecnico-Commerciale.

15.6.10 VERNICIATURA

I riduttori previsti con le protezioni opzionali C3 e C4 sono disponibili in diverse tinte, secondo la tabella seguente.

VERNICIATURA	Colore	Catalogazione RAL
RAL7042*	Grigio traffico A	7042
RAL5010	Blu genziana	5010
RAL9005	Nero intenso	9005
RAL9006	Alluminio brillante	9006
RAL9010	Bianco puro	9010
RAL7035	Grigio chiaro	7035
RAL7001	Grigio argento	7001
RAL5015	Blu cielo	5015
RAL7037	Grigio polvere	7037
RAL5024	Blu pastello	5024

* Colore di fornitura standard se non specificato diversamente

NOTA - L'opzione "VERNICIATURA" è configurabile esclusivamente in abbinamento con l'opzione "PROTEZIONE SUPERFICIALE".

15.6.11 PROVE DOCUMENTALI

AC - Attestato di conformità

Documento il cui rilascio attesta la conformità del prodotto all'ordinativo e la costruzione dello stesso in conformità alle procedure standard di processo e di controllo previste dal sistema di Qualità Bonfiglioli Riduttori.

CC - Certificato di collaudo

La specifica comporta la conduzione di verifiche di conformità all'ordine, controlli visivi generali e verifiche strumentali delle dimensioni di accoppiamento. Sono inoltre condotti controlli generali di funzionamento a vuoto e verifiche della funzionalità delle guarnizioni di tenuta in modalità statica e in funzionamento. Il collaudo si applica ad un campione statistico del lotto di spedizione.

CT - Certificato di tipo

Oltre alle attività competenti al Certificato di collaudo si aggiungono controlli funzionali specifici relativi a:

- controllo rumorosità
- temperatura superficiale a regime
- verifica della coppia di serraggio viteria esterna
- funzionalità eventuali organi accessori

Tutte le attività sono condotte con funzionamento a vuoto del riduttore. Il collaudo si applica ad un campione statistico del lotto di spedizione.

15.7 ESECUZIONE PER ESTRUSORI

Il prodotto HDPE costituisce l'esecuzione per **comando di estrusori monovite** della collaudata serie di riduttori per servizio pesante HDP, con i quali condivide l'architettura generale e la stragrande maggioranza dei componenti.

I riduttori HDPE si caratterizzano per il montaggio nella parte anteriore della robusta cassa in ghisa sferoidale del supporto estrusore dotato di un cuscinetto assiale orientabile a rulli della serie 294...E, di fornitura esclusiva delle primarie marche.

Caratteristiche costruttive

- Cassa in ghisa sferoidale con possibilità di fissaggio universale
- Cuscinetto reggispira ottimizzato in funzione dell'applicazione
- Cuscinetti radiali a rulli cilindrici sull'asse lento
- Dimensioni d'interfaccia vite/cilindro personalizzabili
- Dispositivi di ausilio termico e lubrificazione forzata
- Lubrificazione comune cassa e supporto estrusore
- Anelli di tenuta con mescola in fluoro-elastomero

Per maggiori informazioni consultare il catalogo HDPE.

16 COPPIA DI RIFERIMENTO

I momenti torcenti riportati in tabella sono influenzati dai seguenti elementi: dentature, alberi e cassettaggi. Le prestazioni possono cambiare in funzione delle differenti condizioni applicative (vedere capitolo "Potenza termica e dati tecnici").

	75	—	BX 280SAK 4
	90	—	BX 280SBK 4

Per ulteriori informazioni sui motori elettrici Bonfiglioli,
come opzioni disponibili, prestazioni, dimensioni, ecc...
si veda il catalogo specifico.

Esempio di designazione completa del motoriduttore: **HDP 80 3 51.6 AD 180 BX 180M 4**

Per la verifica termica prendere in considerazione la sezione appropriata del catalogo.

18 MOMENTO D'INERZIA

I momenti d'inerzia sono riferiti all'asse veloce del riduttore e unicamente alla configurazione caratterizzata da un albero veloce pieno e un albero lento pieno a singola sporgenza.

Technical drawing of a shaft with a keyway. The drawing includes the following dimensions and features:

- Dimensions:** A1, A2, A3, A4, B, B1, B2, S, ØL1, ØL2, L, M1, and M.
- Surface Finish:** $\sqrt{Ra} \leq 3.2$ is indicated on the shaft surface.
- Keyway:** A keyway is shown on the shaft with a width of $\sqrt{Ra} \leq 3.2$ and a depth of $\sqrt{Ra} \leq 3.2$.
- Angle:** A 15° angle is shown at the end of the shaft.
- Key:** A key is shown with dimensions M1 and M.

2

Escluso dalla fornitura

In presenza di carichi assiali esterni, vibrazioni, problemi di sicurezza, richiesta di elevata affidabilità o posizioni di montaggio sfavorevoli (es. V5, albero lento verso il basso) è necessario prevedere opportuni dispositivi atti a fissare assialmente l'albero ed ad impedirne lo smontaggio Accidentale.

HDP

RIDUTTORI AD ASSI PARALLELI SERIE HDP IN ESECUZIONE ATEX

Selezionare obbligatoriamente il prodotto idoneo attraverso la compilazione della scheda di selezione (vedi pag 11). A garanzia di un corretto dimensionamento del prodotto, è vivamente consigliato ricorrere all'esperienza e alla specifica conoscenza del Servizio Tecnico di Bonfiglioli.

HDP

21 INSTALLAZIONE, USO E MANUTENZIONE

Tutte le prescrizioni relative all'installazione, uso e manutenzione del prodotto sono specificate nel relativo Manuale. L'utente è invitato a dotarsene scaricandolo all'indirizzo www.bonfiglioli.com dove il Manuale è disponibile in diverse lingue e nel formato pdf. Il documento dovrà essere conservato in luogo idoneo, in prossimità dell'installazione del riduttore, per il riferimento di tutto il personale che è autorizzato ad interagire con il prodotto, per tutto l'arco della vita dello stesso.

22 CARATTERISTICHE COSTRUTTIVE DEI GRUPPI ATEX

- Dotazione di tappi di servizio per il controllo periodico del livello di lubrificante.
- Dotazione di tappi di sfiato con valvola anti-intrusione.
- Anelli di tenuta in Fluoro-elastomero.
- Assenza di particolari in plastica.
- Marcatura nella targa identificativa della categoria di prodotto e del tipo di protezione.
- Componentistica compatibile con le temperature limite previste.
- Dotazione di rilevatori termosensibili.

HDP

23 DESIGNAZIONE

23.1 VARIANTI BASE

23.2 VARIANTI OPZIONALI

NOTA: La selezione combinata di alcune varianti può comportare conflitti di natura tecnica o dimensionale. Consultare la fabbrica per una verifica puntuale.

23.3 VENTILAZIONE FORZATA

Una maggiore capacità di dissipazione termica è ottenibile mediante l'uso di ventole di raffreddamento che sono calettate sull'albero veloce del riduttore. Per i riduttori HDP 60 ... HDP 90 in configurazione VP, ad esclusione delle configurazioni LD – RD – DD e per i riduttori HDP 100 ... HDP 160 in configurazione GL o GR, è possibile richiedere il montaggio di una ventola unicamente sulla parte opposta al lato di comando specificando la sigla **FANL** o **FANR**.

23.4 RAFFREDDAMENTO AUSILIARIO MEDIANTE CENTRALINA AUTONOMA

Sono offerte in opzione due tipi di centraline, ognuna delle quali in più taglie corrispondenti a diverse capacità di raffreddamento, che sfruttano un diverso mezzo di raffreddamento dell'olio, MCRW...EX – dotata di scambiatore acqua/olio e MCRA...EX – con scambiatore aria/olio. Quando si ricorre ad una centralina autonoma di raffreddamento, previa verifica del Servizio Tecnico Bonfiglioli, non è necessario specificare un ulteriore dispositivo di lubrificazione forzata, vedi paragrafo 15.6.2. La disponibilità del dispositivo è evidenziata nella tabella seguente per ciascuna taglia di riduttore. La selezione dovrà tenere conto del deficit di potenza termica da colmare mediante il contributo indicato come P_{TMCRW} o P_{TMCRA} nella tabella del capitolo 17.

HDP 125_EX	X	X	X (**)	
HDP 130_EX	X	X	X	X (**)
HDP 140_EX	X	X	X	X (**)

(*) non disponibile per la posizione di montaggio B3.

(**) non disponibile per i riduttori a due stadi in posizione di montaggio B3

I componenti principali delle centraline sono:

MCRW...EX

- 1) Motopompa con circuito di by-pass
- 2) Filtro con indicatore di intasamento visivo
- 3) Scambiatore di calore acqua / olio
- 4) Pressostato di minima (presente solo in caso di lubrificazione forzata)
- 5) Termostato di massima
- 6) Termostato d'inserzione
- 7) Elettrovalvola

MCRA...EX

- 1) Motopompa con circuito di by-pass
- 2) Filtro con indicatore di intasamento visivo
- 3) Scambiatore di calore aria / olio con termostato
- 4) Pressostato di minima (presente solo in caso di lubrificazione forzata)
- 5) Termostato di massima

Avvertenze di carattere generale:

MCRW...EX : prevedere un circuito di alimentazione dell'acqua che rispetti le seguenti specifiche:

- pressione max 10 bar
- temperatura di mandata max 20°C
- portata minima Q_{H_2O} come da tabella:

	MCRW5_EX	MCRW9_EX	MCRW21_EX	MCRW34_EX
Q_{H_2O} [l/min]	10	18	31	56

MCRA...EX : lasciare adeguato spazio libero attorno allo scambiatore per garantire un flusso d'aria non impedito.

24 ALTRE INFORMAZIONI SUI RIDUTTORI E I MOTORIDUTTORI

Le posizioni di montaggio, i dati tecnici, le predisposizioni motore, i momenti d'inerzia e le dimensioni dei riduttori serie **HDP-EX (Atex)** non cambiano rispetto all'equivalente prodotto delle serie **HDP**. Tutte queste informazioni possono essere reperite nei relativi capitoli di questo catalogo.

HDP

RIDUTTORI AD ASSI ORTOGONALI SERIE HDO

25 CARATTERISTICHE COSTRUTTIVE

Le principali caratteristiche costruttive della serie di riduttori ad assi ortogonali HDO sono:

- 11 grandezze: HDO 71, 81, 91, 100, 110, 120, 125, 130, 140, 150 e 160 a 2, 3 e 4 stadi di riduzione.
- 3 grandezze: HDO 95, 170, 180 a 3 e 4 stadi di riduzione.
- Valori di coppia nominale con distribuzione favorevole su tutto l'arco dei rapporti.
- Rapporti di trasmissione con progressione costante del 12%.
- HDO 71, 81, 91, 95, 100, 110, 120 e 125: Cassa monoblocco in ghisa sferoidale, rigida, resistente e precisa, verniciata internamente ed esternamente. Fissaggio universale grazie alle numerose superfici lavorate e forate. Forme e spessori ottimizzati mediante l'analisi FEM garantiscono elevata rigidezza strutturale e ridotte emissioni acustiche con un peso contenuto.
- HDO 130 ... HDO 180: Cassa in ghisa sferoidale o di acciaio composto elettrosaldato realizzata in due semigusci, con piano di separazione complanare agli assi. L'architettura consente di realizzare interventi di manutenzione in maniera efficace ed economica. Forme e spessori ottimizzati mediante l'analisi FEM garantiscono elevata rigidezza strutturale e ridotte emissioni acustiche con un peso contenuto.
- Ingranaggi conici e cilindrici in acciaio legato, cementati, temprati e rettificati, con correzione dei profili per:
 - ridurre la rumorosità e favorire la regolarità della trasmissione degli ingranaggi veloci
 - massimizzare la coppia trasmissibile delle riduzioni finali
- Alberi veloci generalmente cementati e rettificati e alberi lenti in acciaio da bonifica di elevata rigidezza.

- Configurazioni albero veloce:

Albero cilindrico con disposizione complanare agli assi oppure ortogonale, anche contemporanea-mente. Estremità d'albero secondo UNI/ISO 775-88. Predisposizione motore mediante campana di collegamento e giunto elastico.

- Configurazioni albero lento:

- albero cilindrico integrale, a singola o doppia sporgenza, con estremità secondo UNI/ISO 775-88
- albero cavo con sede per linguetta
- albero cavo con calettatore

- Cuscinetti delle primarie marche del tipo a rulli conici, oppure orientabili a rulli, largamente dimensionati e idonei a sopportare elevati carichi esterni.

- Numerose possibilità di personalizzazione del riduttore tramite le opzioni a richiesta, fra le quali:

- dispositivi termici ausiliari di raffreddamento/riscaldamento
- sistemi di lubrificazione forzata
- dispositivo antiretro
- flangie di fissaggio, o a manicotto
- tenute e guarnizioni di diverso tipo e materiale
- sensori
- dispositivo dry-well per installazioni con albero verticale
- organi di fissaggio

26 CONFIGURAZIONI PRODOTTO

26.1 VARIANTI BASE

26.2 VARIANTI OPZIONALI

HDO

NOTA: La selezione combinata di alcune varianti può comportare conflitti di natura tecnica o dimensionale. Consultare la fabbrica per una verifica puntuale.

26.3 POSIZIONI DI MONTAGGIO

Se necessario le grandezze HDO 71-81-91-95 in posizione B3 possono essere utilizzate con la portella di ispezione rivolta verso il basso (B3 flip over). In questo caso sarà necessario da parte dell'installatore invertire la posizione di alcuni tappi per garantire la corretta lubrificazione. Per questa operazione fare riferimento al Manuale Uso e Manutenzione. Questa operazione è da valutarsi considerandone la compatibilità con le singole varianti (configurazione parte veloce **J**) e opzioni (**SR, HE, TG, OLG**) consultando preventivamente il nostro Servizio Tecnico.

26.4 CONFIGURAZIONE LATO INGRESSO E USCITA

26.4.1 CONFIGURAZIONE ALBERO LENTO

26.4.2 CONFIGURAZIONE PARTE VELOCE

Per l'azionamento da parte dell'organo motore il lato veloce del riduttore può essere configurato con:

- **Albero cilindrico**, a semplice o doppia sporgenza – Specificare **VP**
- **Flangiatura con campana attacco motore IEC o NEMA e interposizione di un giunto elastico** fra gli alberi cilindrici di motore e riduttore. Questa opzione assume la denominazione **G/NG** o **GJ/NGJ** in dipendenza del lato del riduttore su cui è richiesta la predisposizione. Il giunto elastico è parte della fornitura.
- **Flangiatura per accoppiamento diretto** ad un motore elettrico normalizzato in forma costruttiva IM B5. L'allestimento è unicamente disponibile per i gruppi HDO 71 ... 95 nell'esecuzione a tre stadi di riduzione - Specificare **AD**.

26.5 ESECUZIONE

26.6 PREDISPOSIZIONI MOTORE

Le tabelle che seguono riportano gli abbinamenti motore/riduttore che sono possibili in termini puramente geometrici. La variante è attiva se si è precedentemente specificato una configurazione veloce del tipo AD (attacco diretto), oppure G/NG - GJ/NGJ (attacco mediante giunto elastico e campana motore IEC o NEMA).

La normalizzazione tipica dei motori elettrici può portare a selezionare un motore caratterizzato da potenza di targa superiore alla potenza nominale P_{n1} del riduttore che si è dimensionato. Verificare che in nessuna condizione del ciclo di lavoro la maggiore potenza erogabile dal motore elettrico sia effettivamente sviluppata. In presenza di dati di calcolo incerti, o di dubbi sull'effettivo diagramma di carico dell'applicazione è consigliabile installare un dispositivo limitatore di coppia.

26.7 VARIANTI OPZIONALI

26.7.1 DISPOSITIVI TERMICI AUSILIARI

26.7.1.1 VENTILAZIONE FORZATA

Una maggiore capacità di dissipazione termica per i riduttori HDO è ottenibile mediante l'uso di una ventola di raffreddamento calettata sull'albero veloce del riduttore.

È possibile specificare il montaggio di una ventola sull'albero complanare mediante l'opzione **FAN**. La collocazione alternativa della ventola sull'estremità ortogonale, opzione **FANJ**, è possibile solo per i riduttori a tre stadi di riduzione.

Per alcune configurazioni o posizioni di montaggio la ventilazione forzata può non essere compatibile con i sistemi di lubrificazione forzata - opzioni OP... e MOP.

L'effetto della maggiore capacità di dissipazione è rappresentato dal valore di potenza termica P_{TFAN} , rilevabile nel capitolo: **28** e significativo solo se il funzionamento è di tipo continuo.

L'efficienza della ventilazione forzata si riduce grandemente per funzionamento intermittente e velocità di comando inferiori a $n_1 = 900 \text{ min}^{-1}$.

In questo caso per incrementare la potenza termica del riduttore è consigliabile ricorrere ad altri sistemi di raffreddamento ausiliari.

26.7.1.2 RAFFREDDAMENTO MEDIANTE SERPENTINA

La serpentina di scambio – opzione **SR** – è prevista per essere integrata in un circuito di raffreddamento la cui realizzazione è a cura dell'installatore.

Per una resa ottimale, il circuito di alimentazione, deve corrispondere alle seguenti specifiche:

- pressione max 8 bar
- portata min 5 l/min per HDO 71 ... HDO 95
- portata min 10 l/min per HDO 100 ... HDO 140
- temperatura acqua max 20°C

In queste condizioni l'effetto della maggiore capacità di dissipazione termica è rappresentato dal valore di potenza termica P_{TSR} , rilevabile nel capitolo 28

26.7.1.3 RAFFREDDAMENTO AUSILIARIO MEDIANTE CENTRALINA AUTONOMA

Sono offerte in opzione due tipi di centraline, ognuna delle quali in più taglie corrispondenti a diverse capacità di raffreddamento, che sfruttano un diverso mezzo di raffreddamento dell'olio, MCRW... – dotata di scambiatore acqua/olio e MCRA... – con scambiatore aria/olio.

Quando si ricorre ad una centralina autonoma di raffreddamento, previa verifica del Servizio Tecnico Bonfiglioli, non è necessario specificare un ulteriore dispositivo di lubrificazione forzata, vedi paragrafo 26.7.2. La disponibilità del dispositivo è evidenziata nella tabella seguente per ciascuna taglia di riduttore. La selezione dovrà tenere conto del deficit di potenza termica da colmare mediante il contributo indicato come P_{TMCRW} o P_{TMCRA} nella tabella del capitolo 28.

	MCRW5 MCRA5	MCRW9 MCRA9	MCRW21 MCRA21	MCRW34 MCRA34	MCRW51 MCRA51	MCRW70 MCRA70

HDO 170	 BONFIGLIOLI TECHNICAL SERVICE					
HDO 180						

(*) non disponibile per la posizione di montaggio B3.

(**) non disponibile per i riduttori a due stadi in posizione di montaggio B3

I componenti principali delle centraline sono:

MCRW...

- 1) Motopompa con circuito di by-pass
- 2) Filtro con indicatore di intasamento visivo
- 3) Scambiatore di calore acqua / olio
- 4) Pressostato di minima (presente solo in caso di lubrificazione forzata)
- 5) Termostato di massima
- 6) Termostato d'inserzione
- 7) Elettrovalvola

MCRA...

- 1) Motopompa con circuito di by-pass
- 2) Filtro con indicatore di intasamento visivo
- 3) Scambiatore di calore aria / olio con termostato
- 4) Pressostato di minima (presente solo in caso di lubrificazione forzata)
- 5) Termostato di massima

Avvertenze di carattere generale:

MCRW... : prevedere un circuito di alimentazione dell'acqua che rispetti le seguenti specifiche:

- pressione max 10 bar
- temperatura di mandata max 20°C
- portata minima Q_{H_2O} come da tabella:

	MCRW5	MCRW9	MCRW21	MCRW34	MCRW51	MCRW70
Q_{H_2O} [l/min]	10	18	31	56	81	 BONFIGLIOLI TECHNICAL SERVICE

MCRA... : lasciare adeguato spazio libero attorno allo scambiatore per garantire un flusso d'aria non impedito.

Le centraline sono installate sui riduttori come rappresentato nello schema sotto riportato.

(*) Per configurazioni con ingresso J la centralina sarà posizionata sul lato opposto.

Le dimensioni d'ingombro massimo A, B, C, D ed E sono indicative.

26.7.1.4 RESISTENZA DI PRERISCALDO

Con temperature ambientali molto basse può essere necessario pre-riscaldare il lubrificante nel carter prima dell'avviamento e/o durante il funzionamento. L'opzione **HE** prevede l'installazione di una resistenza elettrica e la fornitura a corredo di un termostato per segnalare il raggiungimento della temperatura minima richiesta per un corretto funzionamento. Il cablaggio di quest'ultimo è a cura dell'installatore.

26.7.2 LUBRIFICAZIONE A GRASSO

I riduttori delle grandezze HDO 71 ... HDO 95 in posizione di montaggio V5 vengono forniti con i cuscinetti superiori (non immersi nell'olio) lubrificati a grasso e non necessitano di manutenzione periodica.

I riduttori delle grandezze HDO 71 ... HDO 95 in posizione di montaggio B6 (o B3 con ingresso J) vengono forniti con i cuscinetti superiori (non immersi nell'olio) lubrificati a grasso e necessitano di manutenzione periodica. Per gli interventi di lubrificazione, metodologia, quantità e tipologia del grasso fare riferimento al Manuale Uso e Manutenzione.

26.7.2.1 LUBRIFICAZIONE FORZATA

I riduttori delle grandezze HDO 71 ... HDO 95 in posizione di montaggio V5 e B6 (o B3 con ingresso J) normalmente forniti con i cuscinetti superiori (non immersi nell'olio) lubrificati a grasso possono essere forniti a richiesta con un circuito di lubrificazione forzata per la lubrificazione degli stessi.

Condizioni di applicazione OPZIONALE dei dispositivi di lubrificazione forzata.

HDO 71 ... HDO 95					
		B3	B6	B7	V5
	L R D	●	OP MOP	●	●
	LJ RJ DJ	OP MOP	●	●	●
	LD RD DD	OP MOP	OP MOP	●	●

I riduttori delle grandezze HDO 100 ... HDO 180 in posizione di montaggio V5 e B6 (o B3 con ingresso J) vengono forniti con i cuscinetti superiori non immersi nell'olio e lubrificati attraverso un circuito di lubrificazione forzata per la lubrificazione degli stessi.

Condizioni di applicazione OBBLIGATORIA dei dispositivi di lubrificazione forzata.

HDO 100 ... HDO 180

	L R D	⊖	OP MOP	⊖	OP... MOP
	LJ RJ DJ	OP MOP	⊖	⊖	OP... MOP
	LD RD DD	OP MOP	OP MOP	⊖	OP... MOP

Nota: I dispositivi di lubrificazione forzata per HDO 100 ... HDO 180 possono essere sostituiti, previa verifica del Servizio Tecnico Bonfiglioli, dalle centraline autonome di raffreddamento tipo MCR...

26.7.2.2 POMPA PER POSIZIONI DI MONTAGGIO B3 e B6

Per servizi di tipo continuo e installazioni nella posizione di montaggio B3 o B6 (dove richiesto: vedi capitolo [26.7.2.1](#)) è fornibile a richiesta un circuito di lubrificazione forzata con pompa trascinata meccanicamente e calettata sull'albero intermedio. Il circuito garantisce la lubrificazione dei soli cuscinetti superiori, non immersi in olio.

In fase di ordinativo specificare OP verificando preventivamente la compatibilità del dispositivo, come riportato in tabella in funzione della velocità di comando n_1 e del rapporto di riduzione, vedi schema seguente.

26.7.2.3 POMPA PER POSIZIONE DI MONTAGGIO V5

Per servizi di tipo continuo e installazioni nella posizione di montaggio V5 ed esecuzione 1 (esecuzione 2 per HDO 150 ... HDO 180 a 4 stadi) è fornibile a richiesta un circuito di lubrificazione forzata con pompa trascinata meccanicamente e calettata sull'albero intermedio. Il circuito garantisce la lubrificazione dei soli cuscinetti superiori, non immersi in olio. Se il dispositivo è richiesto congiuntamente al dispositivo di Drywell consultare il Servizio Tecnico Bonfiglioli.

In fase di ordinativo specificare OP1 o OP2 verificando preventivamente la compatibilità del dispositivo, come riportato in tabella in funzione della velocità di comando n_1 e del rapporto di riduzione, vedi schema seguente.

26.7.2.4 MOTOPOMPA PER POSIZIONI DI MONTAGGIO B3 e B6

Per servizi di tipo intermittente e/o qualora le velocità non siano compatibili con l'utilizzo della pompa OP, nella posizione di montaggio B3 e B6 (dove richiesto: vedi capitolo 26.7.2.1) è fornibile a richiesta un circuito di lubrificazione forzata con motopompa alimentata autonomamente - opzione MOP. Il circuito garantisce una portata costante di olio in corrispondenza dei cuscinetti superiori.

HDO

26.7.2.6 SISTEMA DI LUBRIFICAZIONE A BAGNO COMPLETO D'OLIO (VARIANTE SPECIALE)

Come variante della lubrificazione forzata (OP oppure MOP) e della lubrificazione a sbattimento d'olio e grasso (ove previsto), per le sole posizioni di montaggio B6 e V5 è disponibile l'opzione lubrificazione a "bagno completo d'olio".

Con questa variante, ingranaggi e cuscinetti saranno completamente immersi in olio ed il riduttore verrà dotato di un vaso di espansione con la finalità di compensare le eventuali variazioni di volume del lubrificante che nel riduttore si verificano a causa delle variazioni della temperatura.

L'utilizzo del riduttore al di fuori dei "Limiti di temperatura ammessi" può compromettere la corretta lubrificazione, sarà quindi opportuno verificare termicamente il riduttore in funzione del ciclo di lavoro e dell'applicazione.

I riduttori HDO 71, HDO 81, HDO 91, HDO 95, nelle posizioni di montaggio V5 e B6 possono essere previsti con il sistema di lubrificazione "a bagno completo d'olio" consultando preventivamente il Servizio Tecnico Bonfiglioli (tipo di lubrificazione non configurabile come standard).

26.7.3 DISPOSITIVO ANTIRETRO

Il dispositivo antiretro garantisce il funzionamento unidirezionale del riduttore e previene il moto retrogrado per effetto del carico collegato all'albero lento. Oltre ad effettuare la verifica ai carichi impulsivi riportati al paragrafo 11.1, è necessario accertarsi che la coppia richiesta al dispositivo antiretro $M_1 = M_2 / (i \times \eta)$ sia inferiore al momento torcente M_{1max} riportato in tabella.

La specifica della relativa opzione, designata **A**, deve essere necessariamente completata dall'indicazione del verso di rotazione libera dell'albero lento (**CW** oppure **CCW**).

Se particolari condizioni d'uso lo richiedono, il verso di rotazione del dispositivo anti-ritorno può essere variato dall'utente accedendo all'alloggiamento che lo contiene, e invertendo il verso di montaggio della ruota libera. Qualora sia richiesto un intervento di questo tipo contattare il Servizio Tecnico Bonfiglioli per le relative istruzioni.

Il particolare tipo di anti-ritorno, costituito da corpi di contatto a distacco centrifugo, non richiede alcun tipo di manutenzione periodica. L'opzione non è disponibile in abbinamento con altre configurazioni che impegnano la medesima estremità d'albero.

In funzionamento permanente si consiglia di mantenere una velocità di rotazione in folle (sovravanzo) n_{1min} superiore a quella indicata in tabella, al fine di garantire il distacco centrifugo di tutti i corpi preservandoli da fenomeni di usura.

Per ulteriori informazioni contattare Servizio Tecnico Bonfiglioli.

26.7.4 SUPPORTAZIONE RADIALE RINFORZATA

A richiesta sono disponibili cuscinetti di una serie maggiorata, caratterizzati da maggiore capacità di carico radiale. L'opzione HDB è applicabile solo per i gruppi HDO 71, 81, 91 dotati di albero lento cilindrico, esecuzione LP.

26.7.5 TENUTE E GUARNIZIONI

A richiesta, i riduttori possono essere dotati di sistemi di tenuta diversi, e in particolare:

TK – In ambienti caratterizzati da presenza di polveri abrasive sono consigliate tenute tipo Taconite costituite da una combinazione di anelli di tenuta, labirinti e camera a grasso.

La presenza del grasso deve essere garantita attraverso operazioni di manutenzione periodica.

Le grandezze HDO 71 ... HDO 95 con gli ingressi AD-G-NG vengono previste con la tenuta tipo taconite solamente sull'asse lento. L'opzione non è disponibile se abbinata alla variante opzionale "Flange di fissaggio" (FM escluso).

VS – Dotazione di anelli di tenuta con mescola in fluoro-elastomero.

DS – Dotazione di doppio anello di tenuta su ogni estremità d'albero.

DVS – Dotazione di doppio anello di tenuta con mescola in fluoro-elastomero su ogni estremità d'albero.

26.7.6 SENSORI

Termostato bimetallico – Su specifica dell'opzione **TG** è fornita una sonda bimetallica termostatica per rilevare quando la temperatura dell'olio supera il valore di $90^{\circ}\text{C} \pm 5^{\circ}\text{C}$. Il dispositivo è fornito a corredo e l'installazione e il relativo cablaggio elettrico sono a cura dell'installatore.

Controllo livello olio – Su specifica dell'opzione **OLG** in fase di ordinativo è installata una sonda per il controllo remoto del livello del lubrificante. Il dispositivo è funzionante in condizioni di inattività del riduttore. Durante il funzionamento dello stesso, il dispositivo deve essere bypassato. Il cablaggio è a cura dell'installatore.

Il dispositivo può non essere compatibile con altri accessori e/o alcune configurazioni, contattare il Servizio Tecnico Bonfiglioli.

26.7.7 DRYWELL

Il dispositivo "Drywell", opzione **DW**, è un particolare dispositivo di tenuta dell'albero lento ed è unicamente applicabile ai riduttori nella posizione di montaggio verticale V5.

Per i riduttori da HDO 71 a HDO 95 con sistema di tenuta Drywell consultare il Servizio Tecnico Bonfiglioli.

Quando specificato, per i riduttori da HDO 100 a HDO 180, richiede necessariamente l'adozione contestuale di un sistema di lubrificazione forzata, selezionato fra quelli disponibili per l'unità e illustrati nel relativo capitolo di questo catalogo.

Periodicamente, è opportuno verificare/ripristinare la carica di grasso nella camera ricavata sotto al cuscinetto inferiore dell'albero lento.

L'opzione Drywell può avere limitazioni in concomitanza con altre varianti del prodotto. Consultare preventivamente il Servizio Tecnico Bonfiglioli.

26.7.8 ORGANI DI FISSAGGIO

Per i fissaggi di tipo pendolare dei riduttori **HDO 71 ... HDO 95** è fornibile a corredo un braccio di reazione, realizzato in acciaio elettrosaldato e dotato di boccola anti-vibrante.

	A [mm]	B [mm]	C [mm]	D [mm]	E [mm]	F [mm]	R [mm]
HDO 71_TA	40	47	32	76	251	375	47

HDO 95_TA	60	68	42	113	363	520	68

Per i fissaggi di tipo pendolare dei riduttori HDO è fornibile un bullone in acciaio bonificato e opportunamente sagomato per vincolare il riduttore alla struttura di supporto.

Fanno parte del kit anche le molle a tazza con funzione di smorzamento delle vibrazioni il cui precarico dovrà essere regolato dal Cliente al momento dell'installazione rispettando la quota G indicata nella tabella seguente.

Il bullone di reazione dovrà essere collocato sul lato del riduttore adiacente alla macchina che deve essere azionata e nel foro lontano dall'asse lento del riduttore (vedi quota F indicata nella figura seguente).

Il montaggio dal lato coperchio non è possibile, consultare il Servizio Tecnico Bonfiglioli.

26.7.9 PROTEZIONE SUPERFICIALE

HDO 71 ... 95

I riduttori, che laddove non viene richiesta una classe di protezione specifica, nelle zone verniciate (ferrose) rispettano come requisito minimo la classe di protezione C2 (UNI EN ISO 12944-2), sono forniti con protezione superficiale C3 e C4 per una migliore resistenza alla corrosione atmosferica, ottenute mediante verniciatura del gruppo completo.

PROTEZIONE SUPERFICIALE	Ambienti tipici	Temperatura superficiale max.	Classe di corrosività secondo UNI EN ISO 12944-2
C3	Ambienti urbani ed industriali, con umidità relativa dell'aria max.100% (inquinamento ambientale medio)	120°C	C3
C4	Aree industriali, zone costiere, impianti chimici, con umidità relativa dell'aria max.100% (inquinamento ambientale alto)	120°C	C4

I riduttori previsti con le protezioni opzionali C3 e C4 sono disponibili in diverse tinte.

Se non specificata nessuna tinta (vedere opzione "VERNICIATURA") la fornitura viene eseguita con la tinta RAL7042.

A richiesta sono fornibili riduttori per classe di corrosività C5 secondo UNI EN ISO 12944-2, contattando il ns. Servizio tecnico-Commerciale.

HDO 100 ... 180

I riduttori, che laddove non viene richiesta una classe di protezione specifica, nelle zone verniciate (ferrose) rispettano come requisito minimo la classe di protezione C3 (UNI EN ISO 12944-2), sono forniti con protezione superficiale C4 per una migliore resistenza alla corrosione atmosferica, ottenute mediante verniciatura del gruppo completo.

PROTEZIONE SUPERFICIALE	Ambienti tipici	Temperatura superficiale max.	Classe di corrosività secondo UNI EN ISO 12944-2
C4	Aree industriali, zone costiere, impianti chimici, con umidità relativa dell'aria max.100% (inquinamento ambientale alto)	120°C	C4

I riduttori previsti con le protezioni opzionali C4 sono disponibili in diverse tinte.

Se non specificata nessuna tinta (vedere opzione "VERNICIATURA") la fornitura viene eseguita con la tinta RAL7042.

A richiesta sono fornibili riduttori per classe di corrosività C5 secondo UNI EN ISO 12944-2, contattando il ns. Servizio tecnico-Commerciale.

26.7.10 VERNICIATURA

I riduttori previsti con le protezioni opzionali C3 e C4 sono disponibili in diverse tinte, secondo la tabella seguente.

VERNICIATURA	Colore	Catalogazione RAL
RAL7042*	Grigio traffico A	7042
RAL5010	Blu genziana	5010
RAL9005	Nero intenso	9005
RAL9006	Alluminio brillante	9006
RAL9010	Bianco puro	9010
RAL7035	Grigio chiaro	7035
RAL7001	Grigio argento	7001
RAL5015	Blu cielo	5015
RAL7037	Grigio polvere	7037
RAL5024	Blu pastello	5024

* Colore di fornitura standard se non specificato diversamente

NOTA - L'opzione "VERNICIATURA" è configurabile esclusivamente in abbinamento con l'opzione "PROTEZIONE SUPERFICIALE".

26.7.11 PROVE DOCUMENTALI

AC - Attestato di conformità

Documento il cui rilascio attesta la conformità del prodotto all'ordinativo e la costruzione dello stesso in conformità alle procedure standard di processo e di controllo previste dal sistema di Qualità Bonfiglioli Riduttori.

CC - Certificato di collaudo

La specifica comporta la conduzione di verifiche di conformità all'ordine, controlli visivi generali e verifiche strumentali delle dimensioni di accoppiamento. Sono inoltre condotti controlli generali di funzionamento a vuoto e verifiche della funzionalità delle guarnizioni di tenuta in modalità statica e in funzionamento. Il collaudo si applica ad un campione statistico del lotto di spedizione.

CT - Certificato di tipo

Oltre alle attività competenti al Certificato di collaudo si aggiungono controlli funzionali specifici relativi a:

- controllo rumorosità
- temperatura superficiale a regime
- verifica della coppia di serraggio viteria esterna
- funzionalità eventuali organi accessori

Tutte le attività sono condotte con funzionamento a vuoto del riduttore. Il collaudo si applica ad un campione statistico del lotto di spedizione.

HDO

27 COPPIA DI RIFERIMENTO

I momenti torcenti riportati in tabella sono influenzati dai seguenti elementi: dentature, alberi e cassettaggi. Le prestazioni possono cambiare in funzione delle differenti condizioni applicative (vedere capitolo "Potenza termica e dati tecnici").

29 MOMENTO D'INERZIA

I momenti d'inerzia sono riferiti all'asse veloce del riduttore e unicamente alla configurazione caratterizzata da un albero veloce pieno e un albero lento pieno a singola sporgenza.

Technical drawing of the 1000 series motor, showing front and side views with dimensions.

Front View Dimensions:

- Overall width: 370
- Overall height: 160
- Mounting holes: N° 4 x Ø 28 (4 holes, 2 on each side)

Side View Dimensions:

- Overall width: 830
- Overall height: 185
- Mounting holes: N° 4+4 x Ø 28 (8 holes, 4 on each side)
- Internal dimensions: 130, 420, 70, 35
- Angles: 7° 30', 22° 30', 45°
- Internal features: Ø 450, Ø 400, M 24 x 45

HDO 180							

Per agevolare le operazioni di smontaggio è consigliabile realizzare il perno macchina dotato di un foro adatto al passaggio di una sostanza antiruggine (2) e/o predisposto per il montaggio di una boccia cilindrica autolubrificante nel tratto cilindrico di guida opposto al calettatore (1).

In presenza di carichi assiali esterni, vibrazioni, problemi di sicurezza, richiesta di elevata affidabilità o posizioni di montaggio sfavorevoli (es. V5, albero lento verso il basso) è necessario prevedere opportuni dispositivi atti a fissare assialmente l'albero ed ad impedirne lo smontaggio Accidentale.

RIDUTTORI AD ASSI ORTOGONALI SERIE HDO IN ESECUZIONE ATEX

Selezionare obbligatoriamente il prodotto idoneo attraverso la compilazione della scheda di selezione (vedi pag 11). A garanzia di un corretto dimensionamento del prodotto, è vivamente consigliato ricorrere all'esperienza e alla specifica conoscenza del Servizio Tecnico di Bonfiglioli.

32 INSTALLAZIONE, USO E MANUTENZIONE

Tutte le prescrizioni relative all'installazione, uso e manutenzione del prodotto sono specificate nel relativo Manuale. L'utente è invitato a dotarsene scaricandolo all'indirizzo www.bonfiglioli.com dove il Manuale è disponibile in diverse lingue e nel formato pdf. Il documento dovrà essere conservato in luogo idoneo, in prossimità dell'installazione del riduttore, per il riferimento di tutto il personale che è autorizzato ad interagire con il prodotto, per tutto l'arco della vita dello stesso.

33 CARATTERISTICHE COSTRUTTIVE DEI GRUPPI ATEX

- Dotazione di tappi di servizio per il controllo periodico del livello di lubrificante.
- Dotazione di tappi di sfiato con valvola anti-intrusione.
- Anelli di tenuta in Fluoro-elastomero.
- Assenza di particolari in plastica.
- Marcatura nella targa identificativa della categoria di prodotto e del tipo di protezione.
- Componentistica compatibile con le temperature limite previste.
- Dotazione di rilevatori termosensibili.

**34 DESIGNAZIONE****34.1 VARIANTI BASE**

34.2 VARIANTI OPZIONALI

HDO

NOTA: La selezione combinata di alcune varianti può comportare conflitti di natura tecnica o dimensionale. Consultare la fabbrica per una verifica puntuale.

34.3 RAFFREDDAMENTO AUSILIARIO MEDIANTE CENTRALINA AUTONOMA

Sono offerte in opzione due tipi di centraline, ognuna delle quali in più taglie corrispondenti a diverse capacità di raffreddamento, che sfruttano un diverso mezzo di raffreddamento dell'olio, MCRW...EX – dotata di scambiatore acqua/olio e MCRA...EX – con scambiatore aria/olio.

Quando si ricorre ad una centralina autonoma di raffreddamento, previa verifica del Servizio Tecnico Bonfiglioli, non è necessario specificare un ulteriore dispositivo di lubrificazione forzata, vedi paragrafo 26.7.2. La disponibilità del dispositivo è evidenziata nella tabella seguente per ciascuna taglia di riduttore. La selezione dovrà tenere conto del deficit di potenza termica da colmare mediante il contributo indicato come P_{TMCRW} o $P_{TM CRA}$ nella tabella del capitolo 28.

HDO 130_EX	X	X	X	X (**)
HDO 140_EX	X	X	X	X (**)

(*) non disponibile per la posizione di montaggio B3.

(**) non disponibile per i riduttori a due stadi in posizione di montaggio B3

I componenti principali delle centraline sono:

MCRW...EX

- 1) Motopompa con circuito di by-pass
- 2) Filtro con indicatore di intasamento visivo
- 3) Scambiatore di calore acqua / olio
- 4) Pressostato di minima (presente solo in caso di lubrificazione forzata)
- 5) Termostato di massima
- 6) Termostato d'inserzione
- 7) Elettrovalvola

MCRA...EX

- 1) Motopompa con circuito di by-pass
- 2) Filtro con indicatore di intasamento visivo
- 3) Scambiatore di calore aria / olio con termostato
- 4) Pressostato di minima (presente solo in caso di lubrificazione forzata)
- 5) Termostato di massima

Avvertenze di carattere generale:

MCRW...EX : prevedere un circuito di alimentazione dell'acqua che rispetti le seguenti specifiche:

- pressione max 10 bar
- temperatura di mandata max 20°C
- portata minima Q_{H_2O} come da tabella:

	MCRW5_EX	MCRW9_EX	MCRW21_EX	MCRW34_EX
Q_{H_2O} [l/min]	10	18	31	56

MCRA...EX : lasciare adeguato spazio libero attorno allo scambiatore per garantire un flusso d'aria non impedito.
